Lechler is the specialist company for nozzle and spray technology. Make use of the advantages of this wide product range.

With Lechler nozzles, you can optimally fulfil all typical requirements on pickling, galvanising and tinning lines, on strip coating lines, and on continuous annealing lines. These include cleaning and rinsing processes, but also the direct application of acids, for example. A wide range of standardised flat jet, tongue and full-cone nozzles made of various materials such as PVDF, PTFE, polypropylene or stainless steel provide a broad basis for future-orientated and technically perfect solutions.

WHISPERBLAST® air nozzles made of stainless steel or plastic are used for blowing off strips or strip edges.

Self-cleaning spray pipes (the "STAMM" system) allow nozzles and the pipe inner walls to be cleaned in a matter of seconds during operation. This is done either manually or automatically by rotating a cleaning brush inside the spray pipe. This prevents unscheduled and expensive plant shutdowns, and safeguards the product quality of the strip.

If required, Lechler can also supply complete spray pipes made of polypropylene or PVDF for pickling lines. The optimisation of the nozzle arrangement can be incorporated as a task at the same time.
